JUST FIVE CLICKS TO CREATE  
A CUSTOMISED HVAC UNIT

# AL-KO AIRCLOUD

## JUST FIVE CLICKS TO CREATE A CUSTOMISED HVAC UNIT

Do you plan ventilation systems and are you looking for a fast, simple and efficient design for your customised applications?

With the new AL-KO AIRCLOUD design program, you can easily and conveniently configure an HVAC unit that has been tailored to your individual needs in just a few steps online.

When designing equipment, no pre-produced design configurations are used, but instead data is used in real time from our extensive AL-KO Klim@Soft unit configurator. This creates resilient planning documents (performance data, dimensions, budget prices, etc.) that you can also use for tenders. You can also download CAD or BIM models for the HVAC equipment you have designed and process these further for your individual application.

With the AL-KO AIRCLOUD, you save a lot of time during the planning phase, giving you more freedom to focus on the important tasks. You also have the option at any time to coordinate further adaptations with our permanent field sales team.

## CORE FUNCTIONS

- | Rule-checked configuration of HVAC equipment
- | Real-time generation of graphical, commercial and technical planning data
- | Downloadable documents from data sheets and CAD data to BIM data and specifications documents
- | Online project management of all configured equipment

## BENEFITS OF THE AL-KO AIRCLOUD AT A GLANCE

- | Planning principles you can rely on
- | Time-neutral planning assistance right through to specification creation
- | Provision of offer data in real time
- | Intuitive and error-free product configuration through rule checks
- | Process optimisation in the offer process thanks to the seamless transfer of configuration data at our order centre
